

# 2016 ACLS Hangry Algorithm

Shout for Help, Extra Condiments; Activate Emergency Hunger Code

- Did you know that hanger claims 1 out of every 5 lives?
- Never underestimate the hunger of any patient; they may decompensate at any moment
- Do NOT give any fruits and vegetables, this will only cause the patient much pain and suffering
- Always consider a patient's request for double portions a cry for help. Or food.
- If at any point you suspect it isn't hunger and merely emptiness or loneliness, abort code and consult Psychiatry
- In the rare event that crash carts are inadequately stocked with sandwiches, one may resort to turkey burgers as second-line treatment and graham crackers as third-line treatment
- Ketchup, mustard, hot sauce, or sriracha may be added at any point during the algorithm
